5. AVAILABLE SOLUTIONS

Which solutions are available to the customers when they face

There are no widely used software's to detect handwriting; instead, they check with other people to affirm what number it is.

2. JOBS-TO-BE-DONE / PROBLEMS

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

J&P

What is the real reason that this problem exists? What is the back story behind the need to do this job?

RC

What does your customer do to address the problem and get the job done?

detecting accurate digits in a more

Finding the best software for

Handwritten digits can be difficult to understand and interpret at times. It may cause errors when dealing with rough handwriting.

We face numerous challenges in handwritten number recognition, because of different people's jotting styles and the lack of Optic character recognition This investigation offers an in-depth comparison of various machine literacy and deep literacy

3. TRIGGERS

What triggers customers to act?

TR

To wait for manual confirmation of digits.

4. EMOTIONS: BEFORE / AFTER

How do customers feel when they face a problem or a job and afterwards?

FΜ

Feels frustrated and sad when numbers are not entered.

10. YOUR SOLUTION

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

A solution to this problem is the Handwritten digit recognition system, which uses a picture of a digit and recognizes the digit present in the image. Convolutional Neural Network model built with PyTorch and applied to the

MNIST dataset to recognizes handwritten digits.
